INTERNATIONAL BLIND GOLF ASSOCIATION (IBGA)

Sight Classification Form

The information captured on this form will be stored by the National Blind Golf Association as well as the IBGA for the purpose of sight classification. The player's sight classification will be displayed on the IBGA website.

IMPORTANT NOTES TO THE ASSESSOR

<u>General</u>

- 1. It is important that players be tested with best correction.
- 2. In all sight tests (acuity and field if relevant) each eye should be tested individually, but additionally players should be tested with <u>both eyes open</u>.

Acuity Measurement

- 1. Acuity measurements should be carried out by recording the measurement <u>based on two</u> <u>different letter sizes</u> (e.g. 5/60 and 4/36). <u>N.B. Both measurements need to be recorded</u>.
- 2. Start testing from a distance of 6 metres and reduce the testing distance in decrements of a half a metre until the player can identify the specified letter, i.e. from 6 metres to 5½ metres to 5 metres, etc.
- 3. A zero reading may be entered if the player cannot read the specified letter at 0.5 metres.
- 4. <u>N.B.</u> "counting fingers" or "light perception" will <u>not be accepted</u> as acuity measurements.
- 5. If a player's acuity is too low to obtain readings as indicated above please indicate, by placing a tick in one of the boxes provided, whether the player can or cannot distinguish the solid black square below from a blank sheet of white paper at any distance or in any direction.

Visual Field Measurement

N.B. Visual field information is not used by the IBGA for sight classification, but may be of use to National Associations and to confirm diagnoses.

- 1. Visual field only needs to be measured in cases where the player's acuity is 6/60 or better.
- 2. Visual field shall mean the <u>total visual field</u> (including peripheral) and shall be taken as the maximum sum of the fields about the point of fixation along any line through the point of fixation (e.g. temporal + nasal or upper + lower), whichever produces the largest result.
- 3. Visual field should be measured with a perimeter, but if the fields are reduced to below 20 degrees an Amsler Grid at a distance of 33cm may be appropriate. Please specify the method(s) used in the space provided.

Player's Details (Please PRINT IN CAPITALS)

First Name:					
Sex: Male / Female (delete as	appropriate)	Date of Birth:	44	/ /	/
Address:			aa	mm	уууу
Ass	essors Details (Plea	ase PRINT)			
Name:		Optometrist	/ Oph	thalmo	logist (delete)
Address:		Tel No	:		
Signature:		Date:	/ dd	mm	/

Sight Test Results

1. Visual Acuity (N.B. Please read notes to the assessor on the previous page):

Right Eye	Left Eye	Both eyes together			
2 Acuity Measurements	2 Acuity Measurements	2 Acuity Measurements			
1. 2.	1. 2	1. 2			
If player cannot read eye	If player cannot read eye	If player cannot read eye			
chart at all, indicate:	chart at all, indicate:	chart at all, indicate:			
Can distinguish	Can distinguish	Can distinguish			
Black Square	Black Square	Black Square			
Can't distinguish	Can't distinguish	Can't distinguish			
Black Square	Black Square	Black Square			

2. Visual Field (Please read notes to assessor on previous page):

	Right Eye	Left Eye	Both eyes together
Total Visual Field in degrees			

State method(s) used to assess visual field:

3. Was the player tested wearing spectacles? Please CIRCLE:

<u>Yes / No</u>

4. Cause of visual loss, e.g. RP, trauma, etc.:

Please return this form to the Secretary of your National Blind Golf Association. <u>N.B.</u> The National Secretary should check that all required information has been captured on the form and then return it to: Mario Tobia, IBGA Vice-Chairman Admin: <u>Mario.Tobia@comcast.net</u>

For Office Use Only - Classification will be completed by the IBGA
